Turn AI into Your Personal Executive Briefing Assistant

One of the most powerful uses of AI right now is rapid executive briefings. Instead of spending hours reviewing articles, reports, and market updates, leaders are using AI to generate concise briefings on complex topics in minutes.

Example Prompts:

- "Give me a 5-minute executive briefing on the current semiconductor supply chain outlook."
- "Summarize the top AI trends impacting manufacturing in 2026."
- "What are the biggest risks and opportunities for electronics companies using AI?"

AI can quickly synthesize large amounts of information and present it in a clear format. A helpful framework is to ask AI for:

- A short overview
- The three biggest opportunities
- The three biggest risks
- Strategic implications for leadership

AI becomes a strategic thinking partner that helps leaders stay informed and prepared in a rapidly evolving technology landscape. AI will not replace leadership judgment, but it can dramatically accelerate
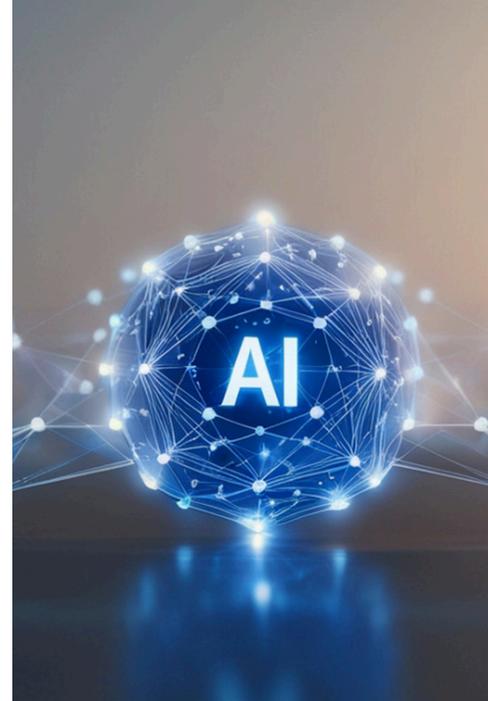

AI Tools for Leaders: The Top-Rated Assistants for Stacking Capabilities

There is no single AI tool that does everything perfectly. The most productive professionals today use a small stack of AI tools, each optimized for a different task. The smartest AI users don't rely on just one system, they use each tool for what it does best.

Example workflow used by many executives:

- **Research**
    - Use Perplexity to gather current data and sources.

- **Analysis**
    - Upload articles or reports into Claude to summarize insights.

- **Strategy & Messaging**
    - Use ChatGPT to develop strategy, presentations, or communications.

- **Execution**
    - Use Copilot to create documents, slides, and meeting notes.

This layered approach turns AI into a comprehensive digital research and strategy team.

Pro Tip: "Prompt Chaining"

Advanced users often use prompt chaining, where the output from one AI tool becomes the input for another.

Example:

- Ask Perplexity for recent industry data.
- Paste the findings into ChatGPT and ask for strategic implications.
- Use Copilot to build the presentation.

This can reduce hours of research into minutes.

AI is not about replacing expertise. It's about augmenting human judgment with faster access to insight. Leaders who learn to combine AI tools effectively will have a significant advantage in decision-making and productivity.
